METHOD AND ARRANGEMENT OF USER-MODIFIED VARIABLES IN A PRESENTATION LIST

ABSTRACT

A method (10) for arranging user-modified variable names in a presentation list such as a drop-down list can include the steps of receiving (12) a system request to display the variables in the drop-down list, and sorting (14) the variables by giving user named variables greater priority over system named variables and then sorting by a second criteria. The method can further include the step of displaying (16) the variables when a user selects the variables using a drop-down control.
